

# COLE MACPHERSON

Aerospace Engineer

📍 University of Colorado Boulder  
📞 (949)-244-6592  
✉️ cole.e.macpherson@gmail.com

## WHO AM I?

I am an undergraduate at the University of Colorado Boulder pursuing a degree in aerospace engineering. My strong interests include air and spacecraft design, as well as, design verification and validation. Particularly, with aerodynamics, propulsion, and thermodynamics.

## GPA

3.42

## B.S. AEROSPACE ENGINEERING

May 2022

## COURSE WORK

- Aerodynamics
- Aircraft Electronics and Communications
- Data Structures
- Aircraft Dynamics
- Orbital Mechanics/Attitude Dynamics and Control
- Material Science
- Structures
- Thermodynamics and Heat Transfer
- Vehicle Design and Performance
- Experimental and Computational Methods

## PROJECTS

|                           |   |                                |
|---------------------------|---|--------------------------------|
| Spring 2020               | <b>Glider Design and Testing</b><br>Designed a MATLAB script that used aerodynamic equations to analyze a glider design that was then fabricated and tested.  | University of Colorado Boulder |
| Fall 2019 and Spring 2020 | <b>Bottle Rocket Modeling and Launch</b><br>Designed a MATLAB script that utilized thermodynamic equations to analyze many parameters for a bottle rocket design. This design was later fabricated and launched.                            | University of Colorado Boulder |
| Spring 2020               | <b>Data Structure Efficiency Analysis</b><br>Constructed C++ code to help the USPS determine which data structure was the most efficient for sorting mail tracking IDs. Five data structures were analyzed for their tracking efficiencies. | University of Colorado Boulder |
| Fall 2020                 | <b>Cube-Sat Radiator Design</b><br>Given a set of design requirements and a cube-sat, a radiator was to be constructed that would keep the satellite within a specific temperature range while in geosynchronous orbit.                     | University of Colorado Boulder |
| Spring and Fall 2020      | <b>Truss Analysis</b><br>Given a specific truss and an applied force, the resultant forces and moments associated with the system were found using ANSYS and a created MATLAB script.   | University of Colorado Boulder |

## SKILLS

English - native  
Spanish - proficient

## OTHER INTERNSHIPS

Computer Science Intern in Barcelona (Cancelled due to COVID-19 pandemic)
